This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating accompositions which involves particulated to might per process. The composition composition of the particulates removed, with a processe; and particulating the particulates from the homogenets, (b) removing cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving cell activation activity. The methods can be used to actions succeed, isothemá, organ rejection, diabetes myocardial infarction, heemorthagic shock, diabetic reinpathy, diabetes, myocardial infarction, heemorthagic shock, diabetic reinpathy, diabetes, women insufficiency, unstable angina or trauma. Processe inhibitors can be used to lower cell activation resulting from processe inhibitors can be used to lower cell activation resulting from these diseases and deficiencies. The detection of an elevated level of hydrogen peroxide dismutase (SOD) indicates leukocyte up presence of superoxide dismutase (SOD) indicates leukocyte up regarded level of hydrogen peroxide in plasma or whole blood and in the event of a disease, and a disease on a disease on see or isothemic complications. An elevated level of hydrogen peroxide in plasma or whole blood and a low level in the presence of SOD is indicative of a chronic or immure compromised condition e.g. hypertension or septeme.
Use of cell activating compositions in developing products for distances and treatment of e.g. Cardiovascular, inflammatory, autoimmune or Alzheimer's disease, traume, arthritis, organ rejection, diabetes, stroke or ischemia

   This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating composition composition (a) homogenizing pancreatic tissue in buffer at about neutral or higher pH to produce a homogenate; (b) removing pancreatic tissue in buffer at particulates from the homogenate; (c) perionally incubating the particulates from the homogenate, with particulates removed, with a protease, and if factionaling the homogenate and selecting fractions that exhibit cell activation activity. The methods can be used for improving transmit of incubation activity. The methods can be used for improving transmit or inflammatory disease, transmit autoimmune diseases, arthritis, organ rejection, diabetes and diabetic complications, stroke, ischemia, alzamarory disease, worderal infarction, hamorrhagic shock, diabetic retinopathy, diabetes, venous insufficiency, unstable angina or trauma. They can be used in the veterinary treatment of a non-imman subject. Protease inhibitors can be used to lower cell activation resulting from the veterinary treatment of a non-imman subject. Confidence diseases and deficienties and efficienties of the onset of an elevated level of hydrogen peroxide can be used to lower cell activation resulting from the presence of superoxide dismusase (Sob) indicates leukocycyc up regulation, e.g. indicative of the onset of an acute cardiovascular cell sorders, such as disease onset or isohemic complications. An elevated level of hydrogen peroxide in plasma or whole blood and a low level in the presence of Sob is indicative of a chronic or immune compromised.
  ö
  condition e.g. hypertension or sepsis. AAY50201-Y50334 represent peptides used in the method of the invention.

The present sequence is bowine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators.

Constructed linds rithing in the processe symmogen in the paraminogen is the principal serine processes symmogen in the pracellular processes. Its active form, plasmin, is extracellular fluids of vertebrates Its active form, plasmin, is regulated by plasminogen activations which hydrolyse a peptide bond in plasminogen to sportaneously convert it to plasminogen expression is plasminogen to sportaneously convert it to plasmin or form tight binding complexes with plasminogen to sportaneously convert it to plasmin The sequence (complexes and plasminogen activation. This peptide is particularly useful when inserted plasminogen. Novel plasminogen activators have been made based upon the plasminogen. Novel plasminogen activators have been made based upon the plasminogen activation/reogenition is it of plasminogen binding proteins. The polypeptides are useful in preparing thrombolytic agents for treating two

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating composition composition (a) homogenisting pancrealic tissue in buffer at particulates from the homogeniste; (b) removing the particulates from the homogeniste; (b) removing the centing the homogeniste; (b) removing fractionality incubating the composition activity. The methods can be used for improving tradefined activation activity. The methods can be used for improving tradefined toucome or reducing risk of treatment of e.g. cardiovascular organ rejection, diabetes and diabete and diabete and diabete some process inflammatory diabetes, women insufficiency, unstable angina or traumator protease inhibitors can be used to lower cell activation resulting from they are diseases and deficiencies. The detection of an elevated level of elevated level of hydrogen peroxide can be used to lower cell activation resulting from hydrogen peroxide can be used to lower cell activation resulting from hydrogen peroxide dismutase (SoD) indicates lawkocyte up creamed of superoxide dismutase (SoD) indicates lawkocyte up creditorascular discresses nated for complexity in plasma or whole blood and a low level in the resence of superoxide in plasma or whole blood and a low level in confidence, such as disease onset or is defended and a low level in confidence or superoxide in plasma or whole blood and a low level in confidence or superoxide in plasma or whole blood and a low level in the method of the invention.
Use of cell activating compositions in developing products for diagnosis and treatment of e.g. cardiovascular, inflammatory, altofammune or Alzheimer's disease, trauma, arthritis, organ rejection, diabetes, stroke or ischemia

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating composition compressions (a) homogenizing pancreatic tissue in buffer at about neutral or higher put to produce a homogenete; it is removing particulates from the homogenete; (c) optionally incubating the resulting homogenete, with particulates removed, with a protesse; and cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving disease, inflammatory disease, trauma, autoimmune diseases, arthritis, corpan rejection diabetes and diabete for complications, stroke, is achemia, and properly diabetes, who moved all infarction, haemorrhagic shock, diabeter complications and particular and activation resulting from the used in the veterinary treatment of a nelwared level of process inhibitors can be used to detect an inflammatory condition. An entered diseases and deficiencies. The detection of an elwared level of presence of superoxide can be used to detect an inflammatory condition. An elevated level of hydrogen peroxide can be used to detect an inflammatory condition. An elevated level of hydrogen peroxide diseases. The detection of an elwared level of presence of superoxide diseases.
   regulation, e.g. indicative of the onset of an acute cardiovascular disorders, such as disease onset of isolate cardiovascular level of hydrogen peroxide in plasma or whole blood and a low level in the presence of SOD is indicative of a chronic or immune compromised condition e.g. hypertension or sepsies. The invention relates to isolated human polypeptides (which may be cyckines) and the polymucleotides encoding them. The protein is useful and antagonists. The polymucleotides are inciding them. The protein is useful and antagonists. The polymucleotides are useful as an array for mismatch corrects or supplements and mucleic acids are useful as mutritional supplements. The protein caths are useful as mutritional to cyckins, cell proliferation, cell differentiation, antinifiammatory, and activins. The protein child in related activities. The protein child in related activities in proteins (and mucleic acids are therefore useful in cathed agnosis and tradament of diseases and florable amportophic child agnosis and tradament of diseases and neuropathics. Alzhemer's, Parkinson's disease, untinigron's diseases and neuropathics. Alzhemer's, Parkinson's disease, untinigron's diseases and neuropathics. Alzhemer's, Parkinson's disease, untinigron's diseases and the control of bone, cartilage, tendom, ligament and/or nerve tissue treon of bone, cartilage, tendom, ligament and/or nerve tissue treoning actions in the ling or liver fiboris, repetuation injury in respectation of bone, cartilage, tendom, ligament and/or nerve tissue treoning useful disease. Indigential professions incidential disease various immune deficiencies and discrets in orthorial disease. Indigenty, allegio reactions and conditions, each as asthma or other respiratory problems, coagulation disorders, cather respiratory problems, coagulation disorders, benefil agravis, allegion and conditions, cather disparential or further and and are useful in intection and conditions, the distance or other respiratory problems, coagulation disorders, the present sequence reprised the present sequence represents a novel protein of the invention.

The present sequence is bovine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators.

CC plasminogen is the principal serine procease zymogen in the principal serine procease zymogen in the principal serine procease zymogen in the principal serine procease zymogen in the principal serine proceeding is associated with a wide range of implicated in pariodalular proceedysis associated with a wide range of physiological and pathological proceases. Plasminogen expression is physiological and pathological proceases. Plasminogen expression is physiological and pathological processes. Plasminogen expression is plasminogen to convert it to plasmin or plasminogen in the sequence with plasminogen to convert it to plasmin or plasmin or plasminogen activation. The sequence monology manysis has identified a six amino acid peptide involved in plasminogen activation, rise per activators have been made based upon the plasminogen activation/recognition site of plasminogen binding proceins. The polypeptides are useful in preparing thromology agents for treating blood clotting disorders such as heart attack.

  The present invention relates to human tumour antigen-derived gene 15 (TADG-15) protein and coding sequence (see AAH23601 and AAB895001.

TADG-15 is an extracellular sexing protease. It was found that TADG-15 is cover-expressed in ovarian tumours. TADG-15 protein or its fragments of 9-20 residues that lack TADG-15 protein or its fragments of at risk of getting an individual against TADG-15, having, suspected of having or at risk of getting cancer. Purtherance, the TADG-15 gene can be used as a dispansatio or therapeutic target in cancer. The present sequence as used the asquence homology alignment with the catalytic domain of TADG-15.
  Novel extracellular serine protease, termed tumor antigen-derived gene
15 protein overexpressed in carcinomas and DNA encoding it, for
diagnosis, treatment, prevention of cancer, particularly breast,

The invention iterates to invest serine procease designate usays.

The invention also relates to vectors and transformants comprising BSSPS concluded and also relates to vectors and transformants comprising BSSPS concluded and an mSSSPS knockout mouse. The invention additionally encompasses anti-BSSPS antibodies and methods of production of such ly artibodies methods of BSSPS detection using the antibodies, and the medical conficions, e.g., pancreatitis of BSSPS proceins of BSSPS detection using the antibodies, and the medical comprising measuring BSSPS concentration in the blood or urine, and a pancreatitis dagnosic agent containing an anti-BSSPs antibody is also disclosed. Nucleotides encoding BSSPs were initially included in a human brain obby. Inbrary using degenerate PCR primers (AAAAT/44-AAT/45) based on conserved regions of serine proceases and nucleotides encoding them are useful in detecting homologues, mutants and polymorphic variants in biological camples (e.g. blood, urine, brain, prostate gland, placenta, restis, and praceasing and splean) as diagnostic markers for conditions such as Allamore Companies and proceases and microals and proceases and sold and placenta, restis, conceasing and splean as diagnostic markers for conditions such as Allamore Companies and procease and splean and procease and splean and procease and microals and splean and splean and and procease and microals and splean and procease and microals and splean and proceases and microals and proceases and microals and proceases and microals and splean and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and proceases and microals and

  AMM02589 is the N-terminal portion of a factor derived from pig paneractic tissue. The factor was designated by. Px inhibits the action of osteoclasts and stimulates the action of osteoblasts, hence Px inhibits bone resorption and stimulates bone formation. The osteoblasts are also stimulates the proliferation of human MG-63 readsancoma cells (osteoblast-like cells). The factor is useful for treating bone loss, e.g. due to osteoporosis or Pager's disease. The and antagonists of Px can be used to hasten bone fracture repair. Antabodies osteoblastic metastasis

   This sequence represents the N-terminal sequence of a serum calium lowering factor derived from rat pancreas. The factor has a molecular weight of 30000 measured by SDS-PAGE and causes a derease in serum levels of calcium in mice in a dose dependent manner. The factor may be used for the prevention and treatment of various bone diseases such as osteoporosis, primary and continuous hyperthyroidism and hypercalcaemia accompanying malignant tumours.

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

   The analogues may be useful in treatment of a variety of disease states. The scissile and group is replaced with H or a substituted carbon moiety effectively inhibiting the activity of peptidases such as elastase, plasmin thrombin, urokinase etc.
R2-NH- derived from an aromatic amine, eg P-nitro-aniline, alpha-
or bete-naphthylamine, or it is R3NH derived from an amino drug, eg
daunocubicin or chloroquine, or it is a gp. which may confer
activity, eh H, OH, CH2CL. When X is the residue of a drug, the
epd. is a prodrug in which the peptide is the substrate for a
specific procease secreted by the target cell for the active drug,
eg tumour cells or microorganism pathogens, eg Plasmodlum
falciparum. Due to the polyhydroxy gp., the cpds. are very soluble
in water or buffer soln, and are able to bu used at high conon. The
cpds. also allow the detection of protesses and peptidases and
allow easy determination of the best substrate for a particular
   Elastase; plasminogen activator; cathepsin; calpain; enkephalinase;
Angiotensin converting enzyme.

The sequences given in AAR38410-11 are cathepsin G inhibiting peptides which were produced by standard peptide synthesis methods. In the context of the invention one of these peptides may be linked via their N-termini to an elastase inhibiting peptide (see features table). The peptide conjugates may be used to prevent metrophil-mediated connective issue degradation associated with inflammatory diseases eg. gout and fhommatoid arthritis. They may also be used for preventing elastin-mediated issue damage in the treatment of emphysema and adult respiratory distress syndrome.

  The sequences given in AAR77196-200 are peptides which were used to demonstrate the proteinsed activity of the cell growth stimulating protein of the invention. The protein was seen to selectively hydrolyse synthetic substrates having an arcmatic amino acid at the C-terminal. The response to the peptide given in AAR7196 was particularly high. The cell growth stimulating protein has a moly wt. of 240 +/- 40 k band a single shburit mol. wt. of 130 +/- 40 k be action and macrophage chemocarcic action, as well as proteinse action and macrophage chemocarcic action, as well as proteinse activity. Its enzymatic activity decreases in the presence of a series protease inhibitor, increase in the presence of various metal sions, and is stabilised in the presence of calcium ion. The protein is particularly that the treatment of wounds, gastric and leg ulcers.

   To measure the activity of E. coip Patase-apha (pectivity) prolyl cistans isomerase alpha), the PpTase and Cak (cyolosporine A) are added in the ceal and mixed for 1 minute Then, this peptide is added and incubaced, and chymocrypain added to start the reaction. The effect of Cak on the inhibition of the prase activity can be detected by varying the art. of the CsA added. The inventors are claming the PpTase-alpha.
  An enzyme originated from a periodontal disease pathogenic microbe and an antibody against the enzyme; for the determination of the progress and activity of the disease
   AMR/7315 is a target substrate for a Porphyrosonas gingivalis (a periodontal disease partogenic microbe) protesse. An antibody raised against the enzyme can be used to diagnose the presence and progress of a periodontal disease, caused by a pathogenic microbe.

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

|           |        | Description | The second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second secon | N-towning of all a | N-terminal of atla | ( Atlantic cod history | ( veill doring mile) | Attached more | Atlantic cod multi | Atlantic cod muici | atlantic cod I mul | N-terminal of an a | 8 10 10 10 10 10 10 10 10 10 10 10 10 10 |

```
transplantation rejection reactions for transplantation of immune cells crowness. With a hydrolase or hydrolase mixture and administering the treated or other tissues. The method comprises treating a source of immune cells or other tissues. The method comprises treating a source of immune cells to a recipient animal. The hydrolase especially has a composed to the preference for removing, destroying, inactivating or disabiling at least cone of CD4, CD8, CD25, CD28, ICD4, ICD51, an integrin, CD154, CD4 and CD80 in contrast to removing, destroying inactivating or disabiling are. The methods are useful for preventing graft versus host disabiling prox. The methods are useful for preventing graft versus host disease by using hydrolase enzymes to remove the cell surface adhesion or the diseases. The methods are useful for preventing call to cell-virus adhesion syndrome comprising inflammation, shock, tunuour metestasses, autoimmune disease, transplantation rejection creactions or microbial infections. The present sequence represents the transplantation of a hydrolase, which may be used in the method of the
   Ameliorating, preventing or treating immune rejection reactions, such as graft versus host disease, autoimmune disease, asthma, cancer, by extra-corporeally treating donor tissue with hydrolase such as a

The present invention relates to a method for ameliorating transpanention rejection reaction. The method comprises treating extra-corporeally donor tissue or donor source of immune calls with a rejection ameliorating effective amount of a hydrolase enzyme. The method is useful for ameliorating, treating or preventing immune rejection reactions such as graft versus host diseases, organ or tissue ransplantation rejection, autoimumus diseases and associated conditions, microbial infection, immune disorder, cysic fibrosis, chronic obstructive pulmonary disease (CODD), atheroselerosis, cancer, asthma, septic shock, toxic shock syndrome, conjunctivitis, reperfusion injury and pain in humans. The present sequence is the N-terminal poptide exemplification of the invention.

  This invention describes a novel method for treating acne and eczema using a KIII-derived multifunctional enzwe [17 which compises 2 or more of the activities of chymotrypsin, trypsin, collaquase, elastase or exopeptidase and is reactive with cell sufface receptors such as proteins or givcoproteins. The product of the invention have antisebritheld, anti-acne, derarkelogical and anti-eczema activity. [1] removes or inactivates cell surface receptors (proteins and adhesion molecules such as plycoproteins) and adhesion molecules such as ICAM-1, CAM-1, CAM-1, CAM-2, CAM-2, CAM-1, CAM-2, CAM-1, CAM-2, CAM-1, CAM-2, CAM-3,

   The invention relates to use of a microgal comprising a crosslinked copytanionic polymer in compositions for treatment of an area affected by a trauma selected from corneal wounds and internal trauma. The campositions further comprise a militiunctional protease having activities selected from two of chymotrypsin activity, trypsin activity, collagense ectivity and elastesse activity. In particular, the protease comprision of six isoforms of white shrimpy (Penaeus vannamei) and the firm of the peptide sequences given in AB22951-B2297. Compositions of the invertion may be used to treat corneal ulcers (compositions of the protease sequences given in AB22951-B2297. Compositions of the invertion may be used to treat corneal ulcers (compositions of the invertion may be used to treat corneal ulcers). They are also used to treat internal traumas selected from an internal organ or tissue or a treamas to a membrane that covers either or internal organ or tissue or the cavity in which one or more internal corneal or tissue or the cavity in which one or more internal corneal or the proteated from the composition. The amount of microgal administered is sufficient to giving tise to a fallesion. The amount of microgal administered is sufficient to grave or a relativity control or a readure formation or reformation of adhesions, and the composition can also be used to treat implant to reduce formation of adhesions, and the composition or control in suffer or particular or a december of man a suffer of a sufficient or prevent corneal implant to reduce formation or a december or and the composition or control or a december of man and the composition or section is sufficient to man implant to reduce formation or a december of man and the composition or reformation or selections and the composition or section is sufficient or man implant to reduce formation or man implant to reduce formation or man implant to reduce formation or man implant to reduce formation or man in man and the composition or man implant to reduce formation or 
  Sequences AAB22951-B22967 represent peptide sequences from a variety of multifunctional hydrolases. Multifunctional hydrolases comprising one of these sequences are claimed for use in compositions of the invention.
  Use of microgel comprising crosslinked polysmionic polymer and optionally proteolytic enzyme in treatment of corneal wounds e.g. ulcers and abrassions and integral traums e.g. surgical wounds and for

The invention relates to use of a microgel comprising a crosslinked polyanionic polymer in compositions for treatment of an area affected by conjositions from corneal wounds and internal trauma. The compositions further comprise a multifunctional processe having compositions further comprise a multifunctional processe having conjositions further comprise a multifunctional processes activity, trypsin activity, collagenase activity and alsaese activity. In particular, the processe collagenase activity and alsaese activity. In particular, the processe collagenase activity and alsaese activity, in particular, the processe compositions of the invention may be used to treat corneal uncersompositions of the invention may be used to treat corneal ulcers (including infected ulcers), or abrasions or a chemical or physical (including infected ulcers), or abrasions or a chemical or physical (including infected ulcers), or abrasions or a chemical or physical (including infected ulcers), or abrasions or a chemical or physical cornear ulcer. They are also used to treat internal traums selected from an internal organ or tissue or the cavity in which one or more internal craums are to a rendon, tendon sheath, a nerve mennages. The internal traums is to a rendon, each of the composition can enhance formation or reformation of adhesions, and the composition can also be used to treat an implant to reduce formation of adhesions.

They are also used to treat an implant to reduce formation of adhesions and also be used to treat an implant to reduce formation or efformation of understoned in a value of the invention of the invention. These sequences are claimed for use in compositions of the invention.
Use of microgel comprising crosslinked polyanionic polymer and opticionally proteolytic enzyme in treatment of corneal wounds e.g. ulcers and abrassions and internal trauma e.g. surgical wounds and for treating implants to reduce adhesions -
                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 25; 85pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25 AA;

The method provides administration of a composition comprising a polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic polyamionic pol
                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treatment of corneal wounds, internal trauma or inflammatory diseases comprises administration of a polyanionic polymer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to a method for treating corneal wounds or internal trains. The method provides administration of a composition comprising bolyanionic polyane. The method is useful for treating corneal wounds, including corneal ulcers, corneal abrasions or injuries which may give rise to corneal ulcers. The method is also useful for treating internal corpus including surgical wounds, trains to a membrane that covers an further method is useful for give rise to adhesions. A further method is useful for treating cervical spondylosis, cumilarive pertuchidis, appendictivis, peridential peridentitis and polaritis or predictions, peridentitis, peridentitis or plant of the intelnametory diseases. This sequence represents the atlantic cod II polywers of the invention.
                                                                                                                                                             Tranquiliser, vulnerary, cytostatic, gynaecological; antiinflammatory; corneal wound, internal trauma, polyanionic polymer; corneal ulcer; corneal abrasion; surgical wound; organ membrane trauma, itssue, cavity, adhesion; cervical spondylosis; cumulative trauma disorder; appendicitis, endometriosis; pelvic inflammatory disease, adhesive peritonitis; peridentitis; peridentitis; pleuritis, pleuritis; inflammatory disease; multifunctional protein; hydrolase; enzyme; atlantic cod.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treatment of corneal wounds, internal trauma or inflammatory diseases

transplantation rejections for transplantation of immune cells corother trisques. The method comprises treating a source of immune cells or other trisques. The method comprises treating a source of immune cells or other trisques. The method comprises treating the treated immune cells to a recipient animal. The hydrolase especially has a immune cells to a recipient animal. The hydrolase especially has a preference for removing, destroying, inactivating or disabiling at least professore for removing, destroying, inactivating or disabiling at least copies and copies are useful for preventing graft versus host disabiling Tex. The methods are useful for preventing graft versus host disabiling Tex. The methods are useful for preventing graft versus host disabiling that preventing in the diseases. The methods are useful or tracting or preventing in the diseases. The methods are used for treating or preventing cell-cell or cell-virus adhesion syndrome comprising inflammation, shock, remour metastases, autoimmune disease, transplantation rejection resertions or microbial infactions. The present sequence represents the treating of trypsin hydrolase, which may be used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tranguiliser; vulnerary; cytostatic; gynaecological; antiinflammatory;

The invention relates to a method for treating corneal wounds or internal trauma. The method provides administration of a composition compitating a polyamionic polymer. The method is useful for treating corneal wounds, including corneal ulcers, corneal abrasions or injuries which may give treams, including energical wounds is also useful for treating internal traums, including surgical wounds, traums to a membrane that covers an organ, tissue or cavity or traums likely to give rise to adhesions. A organ, tissue extend esturing cervical spondylosis, cumulative traum disorder, endometricals, pelvic inflamatory disease, adhesions other inflamantory disease, adhesive peritonitis, appendictis, peridentitis, pericarditis and pleuritis or peptide region of an albants cod multifunctional hydrolase relating to the polyanionic polymers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Figh; serine proteinase; pain; acute inflammation; chronic inflammation; arthritis; action arthritis; architis; arthritis; architis; systemic lupus erythematosia arthritis; fibromyalgia; systemic lupus erythematosus; phlebitis; tendinitis; rash; psoriasis; achie eczama; facial seborrheic eczema; foreskin infection; athlees's foot; figuulae infection ulcer; navel infection; wrinkle; ecze, kelloid; boll; wart; albergic tich; hemorrhoid; wound; fungal infection; autoimmune disease.

The specification describes a fish serine proteinase. The proteinases are useful as medicaments, for treating and preventing a disease in a human or an animal such as pain, acute inflammation, chronic architis, unflammation, chronic chronic chronic architis, inflammation, architis, used arthritis, septic arthritis, fibromyalai wystemic lupus erythematosus, phlobitis, tendinitis, and portasis, are, eczema, facial seborrheic eczema, erzema of the hands, for neck, foreskin infections, athlete's foot, fistulas infections, facious, wounds trom burns, fungal infections and immunological and cautoimnume diseases. They are also useful for removing abed or peeling client from otherwise healthy skin, and for treating or preventing a customatic with pathogenesis is caused by bacteria, virus, tungus, prasels or a procozon or a receptor acused by bacteria, virus, fungus, increases or a procozon or a receptor acused by bacteria, virus, fungus, increases the presents the amino acid sequence of cod trypsin increases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Fish serine proteinase, useful as a cosmetic, medicament for treating ecrema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding

The present sequence represents a trypsinogen, which is a procease (1) colled for manuals japonica or Japanica (2) Japonica (3) alogadies (3) alogadies (3) alogadies (3) alogadies enchowy). The present invention also describes: (1) a low present in the amino acid sequence in which part of the amino acid residue is replaced, inserted having a bio-activity substantially same as (1); (2) an expression collection of a factor of the amino acid sequence in which the above DNA is recombined; (3) producing a satisfication of a bio-activity substantially same as (1); (2) an expression derived procease in which a host cell transformed by the above DNA and derived protease (4); a procease (5) the preparation of a upleasant small no other procein derived from fish; and containing substantially no other procein derived from fish; and containing substantially no other procein derived from fish; and containing substantially alogades in a short period while inhibiting the generation of an upleasant small competed to a solution containing salts in containing all and the above method is added to it and fermented for about 1 to 11 and short nearly method is added to it and fermented for about 1 to 11 and short nearly.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for treating acne and eczema using a krill-derived multifunctional enzyme (1) which comprises 2 or more of the activities of chymotrypsin, trypsin, collagenase, elastese 2 or exopeptidase and is reactive with cell surface receptors such as proteins or glycoproteins. The product of the invention have antiseborrheid, anti-acne, dermatological and enti-eczema activity. (1) removes or inactivate ell surface receptors (proteins and glycoproteins) and adhesion molecules such as ICAH-1 (1.e. CD54), ICAM-2 (2) respectively. This sequence represents the N-terminal fragment of an atlantic occid (Gadus sp.) hydrolase which is used to describe the

The invention relates to use of a microgel comprising a crosslinked copyanionic polymer in compositions for treatment of an area affected by polyanionic polymer in compositions for treatment of an area affected by compositions further compositions directly and internal trauma. The compositions further compositions of chymertypsin activity, trypsin activity, collagenase activity and eleates activity. Trypsin activity, collagenase activity and eleates activity. In particular, the protease will include the poptide sequences given in AAB22951-82296.

Compositions of the invention may be used to treat corneal ulcers compositions of the invention may be used to treat corneal ulcers. They are also used to treat internal trauma selected from an internal organ or tisque or the canifor to membrane that covers either can internal organ or tisque or the cavity in which one or more internal can internal organ or tisque or the cavity in which one or more internal can internal organ or tisque or the cavity in which one or more internal can internal organ or tisque or the cavity in which one or more internal can internal organ or tisque or the cavity in which one or more internal can internal organ or tisque or the cavity in which one or more internal organ or tisque or the cavity in which one or more internal capacity in which one or more internal capacity in which one or more internal capacity in which one or more internal organ or tisque or the trauma is to a tendon, tendon sheath, and the composition or a new enternal trauma is to a tendon, tendon sheath, and the composition or reformation or adhesions. The amount of microgel administrated is sufficient to prevent adhesions. The amount of minorial and publicational hydrolasses comprising one of these sequences are claimed for use in composition or the enternal trauma sequences from a variety of these sequences are claimed for use in composition or the enternal capacity in the capacity or the enternal capacity and the composition or the enternal capacity and the capacity or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gapa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 10, p. p.
